Kerb lifter for precast elements

Telescopic lifting clamp with automatic release

This clamp represents an innovative lifting accessory, specifically designed for use with suitable lifting equipment and machinery. Its design was driven by the need to create a device capable of easily, quickly, and safely gripping concrete artifacts and curbs of various sizes. The clamp adjustment is easy and quick via a spring pin, while the 185 mm grip depth allows for safe lifting even of chamfered curbs, thanks to the clamp's ability to grip under the chamfer itself. The suspension eye provides a practical attachment point for cranes and other lifting equipment, ensuring stable and controlled lifting. Automatic release is managed by a device that transitions from "grip" to "release" mode completely automatically. The rubber pads, easily replaceable, ensure a secure grip without damaging the lifted objects. All our clamps are built and tested according to UNI EN 13155, UNI EN ISO 12100, UNI EN 13854, ISO 8686, and UNI EN 10204 standards and come with the appropriate label, certificate of conformity, and user and maintenance manual. All our products are covered by a one-year warranty (European Directive).
